

Abstract

This is an object for enabling an illuminating device for a mirror to also be used for an illuminating device for a cardholder and a small article receptacle of a sun visor body.

According to the present invention, in a vehicle sun visor having a mirror (26) with a cover mounted to a surface of a sun visor body (20) and configured such that an illuminating device (40) hidden by the cover (30) is uncovered and illuminated when the cover (30) is opened, the vehicle sun visor includes an auxiliary lighting means that can light the illuminating device (40) in the state where the cover (30) is closed, and a light leaking means that can leak the light of the illuminating device (40) to the outside of the cover (30) such that the illuminating device (40) can illuminate the surface of the sun visor body (20) in the state where the cover (30) is closed.
